

TA4 Programmable Digital Temperature Controller

Features

Power Supply : AC , 90 > 260 VAC
: DC , 18 > 30 VDC
Dual Set Switch point relays
Measurement ranges
Temperature: -150 > +400C
Output Voltage : 24 Volts 30ma
Display 4 Digit LED
CE Compliant

General Description

TA Digital Temperature Controllers is a economical loop powered programmable unit Designed with the customer in mind It is Meant for most applications from Basic functions only that are required for temperature control. or energy saving application and the control of objects with large time constants, Which makes this unit much easier to use and available for a reasonable price

The TA4 comes with a PT100 Thermocouple and 3 meters of lead and has 2 programmable set points 4 digit display and 2 x SSR Logic normally open relay outputs.

Typical application circuit
